

## Formulary Instructions

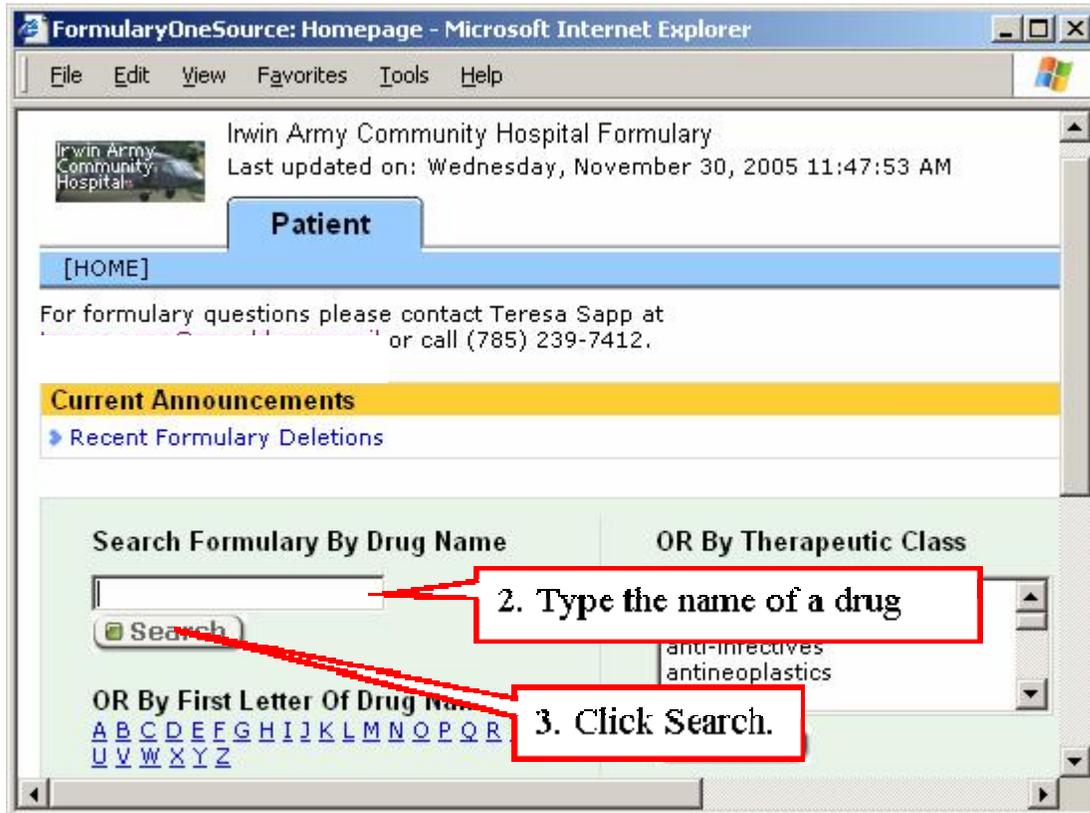

It is really quite simple. There are four main steps to discover whether or not a particular medication is covered by insurance.

1. Type the following link into the address bar of your internet browser and click "Enter"

<http://www.pharmacyonesource.com/fos/default.asp?L=67143&g=1>

2. Type the name of a medication into the search box.

3. If the medication is on formulary, you will see this screen:

The screenshot shows a web browser window with the URL <http://www.pharmacyonesource.com>. The page is titled "FormularyOneSource: Homepage". On the left, there are three search options: "Search Formulary By Drug Name" (with a search box containing "zocor"), "OR By First Letter Of Drug Name" (with a list of letters A-Z), and "OR By Therapeutic Class" (with a dropdown menu showing "alternative medicines", "antihyperlipidemic agents", "anti-infectives", "antineoplastics", and "biologicals"). On the right, the "Search Results:" section shows "Found 1 formulary exact match" and a table with one entry: "Zocor (simvastatin)". A legend below the results defines various status codes: P = Preferred, R = Restricted, S = Status Pending, TI = Therapeutic Interchange, = Sound-Alike/Look-Alike Risk, = Substitution, = Quantity Limit, and = Prior Authorization. A red callout box with the text "4. Click on the drug name." points to the "Zocor (simvastatin)" link in the results table.

The next page will give you all of the information you need:

The screenshot shows the "Zocor on Master Formulary" page. At the top, it says "Zocor (simvastatin)". Below this, it lists "Therapeutic Classes: antihyperlipidemic agents >> HMG-CoA reductase inhibitors". A warning is displayed: "WARNING: Look-Alike/Sound-Alike Risk: Cozaar, Lipitor, Yocon, Zestril, Ziac, Zolof". A table follows with columns for "Route, Dose Form", "Strength", and "Formulary Status: Comments". The table contains three rows of data. Red callout boxes highlight specific information: "The drug name: (Brand & Generic)" points to "Zocor (simvastatin)"; "Formulation information" points to the "Route, Dose Form" column; and "Formulary status" points to the "Formulary Status: Comments" column.

Route, Dose Form	Strength	Formulary Status: Comments
oral, tablet	10 mg	On Formulary
oral, tablet	20 mg	On Formulary
oral, tablet	80 mg	On Formulary
